ABDUL REHMAN
FRONTEND DEVELOPER

SUMMARY

Frontend Developer with 3+ year of experience in crafting responsive, high-performance web applications using HTML, CSS, JavaScript, React.js, and Tailwind CSS. Skilled in building intuitive, user-focused interfaces, optimizing web performance, and integrating RESTful APIs for dynamic, scalable solutions. Proven ability to collaborate across teams, implement reusable component-based architectures, and deliver clean, maintainable code in fast-paced environments.

Government College of Science , Lahore
- Relevant Coursework: Fundamentals of Computer Science, Introduction to Programming, Statistics, Mathematics, English, Physics

WORK EXPERIENCE

**Frontend Developer| 2022-2025**
WellCreator
- Collaborated with designers and backend developers to implement user-friendly features.
- Developed and maintained responsive web interfaces using React.js, Tailwind CSS, and JavaScript.
- Optimized website performance and improved page load times through code refactoring and lazy loading.

PROJECTS

abdul-rehman-fawn.vercel.app
Personal Portfolio
Designed and developed a personal portfolio website to showcase my projects and technical skills. The frontend was built using React.js with Tailwind CSS, combining Material UI and shadcn/ui for a clean, responsive user interface. Backend functionality was handled using Node.js and SQL, enabling dynamic content management. I utilized React Context API for efficient state management across components. On the "Game Development" page, I integrated a 3D model with scroll-triggered animations to create an engaging, interactive experience that demonstrates my interest in immersive web design.

Wellcreator.com
At wellcreator
Contributed to the design and development of the company's official website using React.js, integrating Bootstrap and Material UI to ensure a responsive, accessible, and visually consistent user interface. Collaborated with cross-functional teams to implement key features, optimize performance, and maintain design integrity across devices. Focused on clean, modular code and component reusability to support scalability and long-term maintainability of the frontend architecture.
